SERVICES

We specialize in developing applications that work through AutoCAD®, SQL Server and Microsoft Office® products operating in Windows® Operating Systems.

Our approach includes:

- Utilizing our extensive experience with facilities and data management
- Employing the latest software tools for development
- Incorporating developed (FDMS) software modules that reduce our design time and cost

Our expertise includes:

- Database application development

We create the databases and the application to access and maintain the data. Whether you're looking for

- Document management
- Facility management
- Space management

or a method to organize your current information or new data, we are prepared to provide you a solution

- CAD application and development

We offer expertise in creating applications including integrated CAD/database linking. Whether you're looking for

- A complete application
- Lisp routines
- ARX routines

or specific menu, macros or programs, we will present a solution.

Our service includes:

- Installation and integration
- Training
- Customized Help
- Preparing data, importing or input
- Established or Specialized programming

Providing software and support to meet the objectives of our customer's, by using our extensive experience in business applications and the integration of the FDMS system into the day to day environment with standardized and customized applications. We invite you to review our capabilities.
